**Snowmobile** Nov 18 2021 In 1922, when Joseph-Armand Bombardier was fifteen years old he built his first snow vehicle. He had always loved to tinker with motors and make things go, and he dreamed of building a vehicle that could go over snow. His first attempt, using a Model T Ford engine and a wooden propeller, worked well. To Joseph-Armand's mind, anyhow. Not so much his father, who made him take the contraption apart. Over the years, Joseph-Armand dreamed of becoming a great mechanic and inventing machines. But when his young son died of a fever because it was impossible to get to the hospital over the snow-covered roads, Joseph-Armand applied his single-minded determination to building a vehicle that could go over snow. It took years, but he accomplished his goal. His invention changed the way people in snow country lived. Inaccessible roads could now be travelled, taking patients to hospitals, doctors and priests to the needy, children to school, and even mail to residents.

**Diffusion of Innovations, 4th Edition** Nov 06 2020 Since the first edition of this landmark book was published in 1962, Everett Rogers's name has become "virtually synonymous with the study of diffusion of innovations," according to Choice. The second and third editions of Diffusion of Innovations became the standard textbook and reference on diffusion studies. Now, in the fourth edition, Rogers presents the culmination of more than thirty years of research that will set a new standard for analysis and inquiry. The fourth edition is (1) a revision of the theoretical framework and the research evidence supporting this model of diffusion, and (2) a new intellectual venture, in that new concepts and new theoretical viewpoints are introduced. This edition differs from its predecessors in that it takes a much more critical stance in its review and synthesis of 5,000 diffusion publications. During the past thirty years or so, diffusion research has grown to be widely recognized, applied and admired, but it has also been subjected to both constructive and destructive criticism. This criticism is due in large part to the stereotyped and limited ways in which many diffusion scholars have defined the scope and method of their field of study. Rogers analyzes the limitations of previous diffusion studies, showing, for example, that the convergence model, by which participants create and share information to reach a mutual understanding, more accurately describes diffusion in most cases than the linear model. Rogers provides an entirely new set of case examples, from the Balinese Water Temple to Nintendo videogames, that beautifully illustrate his expansive research, as well as a completely revised bibliography covering all relevant diffusion scholarship in the past decade. Most important, he discusses recent research and current topics, including social marketing, forecasting the rate of adoption, technology transfer, and more. This all-inclusive work will be essential reading for scholars and students in the fields of communications, marketing, geography, economic development, political science, sociology, and other related fields for generations to come.

**Ski-doo Racing Sleds 1960-2003 Photo Archive** Jul 27 2022 Hand picked photos & in-depth captions document the development of Ski-Doo's racing sleds from inception to the present. Though it's been said the first snowmobile race was held the day the second machine was built, the first organized race to capture wide attention was in December 1961 with about 40 entrants. After discovering the impact of this first race, Ski-Doo began devoting attention to building racing sleds in 1967 and still builds models specifically for racing even today. Most engine, suspension system, and chassis improvements in the snowmobile industry are attributed to the efficiencies requested by racing. This book includes some of today's most collectible production snowmobiles like the TNT and BLIZZARD models, along with custom one-off models designed specifically for racing. Many of these interesting Ski-Doo photographs have never been published before.

John Deere Snowmobiles May 25 2022 Long respected as a manufacturer of sturdy agricultural machinery, the John Deere Company began in the 1960s to build a line of consumer products in a dedicated factory in Horicon, Wisconsin. This detailed history, written by two key participants in the snowmobile program, describes the development of John Deere snowmobiles from start to finish: the design and engineering decisions that shaped each important model; reception of the snowmobiles by consumers; the factory race teams; the introduction of front-engine and water-cooled models; the process of selecting engines and negotiating with suppliers, including when problems developed; and the snowmobiles' impact on product engineering.
