A thorough knowledge of the "hows" and "whys" of building assemblies is a prerequisite to effective architectural design. Architectural detailing - creating drawings that accurately describe particular assemblies within a design - is essential to controlling the total building process. This book provides students with a solid grounding in building assemblies, followed by step-by-step guidance on how to develop effective professional architectural details which are essential to becoming a skilled architectural detailer. More than 1,000 expertly-crafted design details (including over 400 new CAD-drawn 3-D images, details, and photographs) help illustrate the concepts presented while establishing a high level of detailing excellence to which students will aspire. First published in 1977, this volume was intended as a sourcebook for designers and attempts to specify the ingredients necessary to develop a design program rather than postulate a model program for which no consensus exists. As such it filled a void in the existing literature which seldom covered programming with much depth and provides technical aids to guide designers. The author attempts to integrate the pioneering contributions from others in order to identify the substance of programming for designers and represents a culling of the strategies and techniques from the social, behavioural and management sciences — building on the developing efforts of other disciplines. An attempt has been made by the authors in this book to explain the general principles of the subject of Town Planning. The subject matter is expressed in a simple language and practical manner. The treatment is clear, methodical as well as interesting and easy to

follow. Indian cities are mechanisms for social engineering—more powerful than anything we have seen before. They will transform this country. A Place in the Shade explores architectural and urban issues in India, from the house as a machine for dealing with our often hostile climate, to the metaphysical role of architecture as a Model of the Cosmos. This reflective, provocative and consistently readable collection of essays argues that our habitat must respond to the overriding parameters of climate, culture and financial resources and that our physical environment should accommodate notions of inclusion and diversity, and that priceless quality of synergy which characterizes a city. Charles Correa identifies the defining issues of the urbanization process that is so rapidly transforming India. He writes, 'You cannot look at cities without wandering into architecture on the one hand and politics on the other.' Tragically, over the last few decades, urban real estate has become the primary source of financing for political parties and the politicians who run them. But our towns and cities are assets too precious to be squandered in this manner. Like the wheat fields of Punjab and the coal fields of Bihar, cities are a crucial part of our national wealth. Their success—or their failure—will determine our future. Indian cities are mechanisms for social engineering more powerful than anything we have seen before. They will transform this country. In response to a need for maintaining the balance between the growing influence of NGOs in international decision-making and the adequate formal mechanisms for their involvement in these processes, the book examines and compares rules and practices existing in this area in a number of international institutions. The analysis focuses in particular on the legal basis for NGO involvement, forms of involvement, criteria and procedures for NGO accreditation with international organizations, and rules on subsequent monitoring of accredited NGOs. International institutions that are covered include the United Nations, the United Nations Conference for Trade and Development, the International Labor Organization, the World Intellectual Property Organization, the World Health Organization, the United Nations Environment Program, the United Nations Development Program, the World Bank, the International Monetary Fund, and the World Trade Organization. The study is based on primary and secondary rules and other documents of the international organizations concerned and is complemented by interviews with relevant officials. The final chapter provides a comparative analysis of the examined systems. The book will serve as a valuable tool for NGOs that wish to learn about opportunities for engagement with prominent international organizations. The study can also be helpful in assessing relative effectiveness of different modalities for engagement with NGOs and in considering improvements to the relevant systems.
