Designed for the Yamaha XJ900 Diversion, this is a service and repair manual for the do-it-yourself motorcycle mechanic. Diversion in youth justice is a subject of enduring interest. It concerns the processes by which decisions are made about whether or not to prosecute young offenders, and this book explores the continuing debates and historical developments which shape these processes. The treatment of young offenders is a contentious subject, and this book provides a comprehensive review of out of court decision-making in the context of wider arguments about how we should deal with the crimes of the young. This book follows a broadly historical structure, exploring the development of ideas and approaches to agency decision-making at the point of prosecution. This leads to the identification of a number of distinctive 'models' of diversion, reflecting both specific periods of time and particular philosophies of intervention with young people in trouble with the law. Based on this classification, this book explores the implications for wider debates about childhood, crime and punishment and how these relate to theories of social control. This, in turn, leads to the conclusion that diversionary ideas and practices act as a kind of barometer for wider developments in the governance of youth. This is one of the very few books that focuses exclusively on diversion as a feature of youth justice, and it provides a range of

original and contemporary insights into this subject area which remains of considerable interest in this field, both academically and in practice. The ideas outlined here will contribute to new thinking in youth criminology, as the discipline responds to a prolonged period of apparent liberalisation in the treatment of young offenders which has yet to be fully understood or properly theorised.

Considers H.R. 1 and S. 308, to authorize HEW and Army Corps of Engineers to study the effects of increased water diversion from Lake Michigan into the Illinois Waterway and the effects upon the Great Lakes. Includes "Memorandum for U.S. as Amicus Curiae in the Supreme Court, States of Wisconsin, Minnesota, Ohio, and Pennsylvania v State of Illinois and the Sanitary District of Chicago, On Amended Application of the States of Wisconsin, Minnesota, Ohio, Pennsylvania and New York for a Reopening and Amendment of the Decree of Apr. 21, 1930, and the Granting of Further Relief," Oct. Term, 1958 (p. 63-123).

Through theoretical and empirical examination of legal frameworks for court diversion, this book interrogates law's complicity in the debilitation of disabled people. In a post-deinstitutionalisation era, diverting disabled people from criminal justice systems and into mental health and disability services is considered therapeutic, humane and socially just. Yet, by drawing on Foucauldian theory of biopolitics, critical legal and political theory and critical disability theory, Steele argues that court diversion continues disability oppression. It can facilitate criminalisation, control and punishment of disabled people who are not sentenced and might not even be convicted of any criminal offences. On a broader level, court diversion contributes to the longstanding phenomenon of disability-specific coercive intervention, legitimates prison incarceration and shores up the boundaries of foundational legal concepts at the core of jurisdiction, legal personhood and sovereignty. Steele shows that the United Nations Convention on the Rights of Persons with Disabilities cannot respond to the complexities of court diversion, suggesting the CRPD is of limited use in contesting carceral control and legal and settler colonial violence. The book not only offers new ways to understand relationships between disability, criminal justice and law; it also proposes theoretical and practical strategies that contribute to the development of a wider re-imagining of a more progressive and just socio-legal order. The book will be of interest to scholars and students of disability law, criminal law, medical law, socio-legal studies, disability studies, social work and criminology. It will also be of interest to disability, prisoner and social justice activists.

A description of conduct and manners appropriate for young men, especially those at Oxford University. The effects on channels of small, low-head seasonal water diversions in the Snake River drainage were investigated. Channels below small diversions were compared to the channels immediately above the same diversions to determine if differences in flow conveyance, substrate sediment size distribution, or streamside vegetation density were present. Estimates of flow conveyance were greater above the diversions, as measured by the area between the edges of vegetation on both banks, and by frequent-flow indicators, which generally approximated bankfull stage. No significant difference in substrate particle size or in channel roughness was found between channels above and below diversions. Although use histories of the diversions were not available, limited observations and conversations with users suggest that many of the diversion structures did not substantially divert high springtime flows so that passage of channel-forming flows probably occurred. Some diversion structures apparently divert or trap a portion of the bedload. Stem diameters of vegetation 6 to 48 inches above the ground were significantly larger above the diversions. Tests of stem densities were not significant. Stratification by substrate, season and size of diversion, community type, and source of summer water may be necessary to properly evaluate the effects of small diversions on vegetation stem density and vigor. The elevation of the edge of vegetation appears to be a viable alternative to frequent flow or bankfull indicators for estimating flow conveyance. It also addresses the question of vegetative encroachment into the channel. Use of the edge of vegetation as a channel feature for flow estimates merits further testing. It appears that the operation of the small forest stream diversions studied has not substantially altered most of the parameters studied. Past hydrographs and historical hydrologic data, however, are needed to fully evaluate the channel and vegetation responses. It has long been known that the pathway through the criminal justice system for those

with mental health needs is fraught with difficulty. This interdisciplinary collection explores key issues in mental health, crime and criminal justice, including: offenders' rights; intervention designs; desistance; health-informed approaches to offending and the medical needs of offenders; psychological jurisprudence, and; collaborative and multi-agency practice. This volume draws on the knowledge of professionals and academics working in this field internationally, as well as the experience of service users. It offers a solution-focused response to these issues, and promotes both equality and quality of experience for service users. It will be essential reading for practitioners, scholars and students with an interest in forensic mental health and criminal justice.
