A Primer on Complete Denture Prosthodontics Feb 07 2021 Complete denture prosthodontics has been questioned for its relevance in the recent past. Dental health has improved beyond our imaginations and perhaps that might have built an over confidence to think that complete dentures can be dispensed with. Hence a palpable deterioration has taken place in taking particular interest in complete denture prosthodontics. Decrease in the number of patients requiring complete denture service is greatly compensated by the higher expectancy of life. In India, the average age of a patient requiring complete dentures and that too the third and the fourth dentures, is crossing seventy. The need for complete denture service has not yet reduced but the process has become more complicated. The present day dentist in fact do not relish making complete dentures because many of our techniques are old, time consuming and not user friendly. Patients have also started disliking the crude time consuming methods. While we started writing this book, these were the thoughts that came across and we have tried our best to simplify the clinical methods without limiting the desired quality envisaged by the founders of our profession. Allow us to take pride in claiming a better user friendliness of the clinical methods described in this book. We do not claim a space that is occupied by the standard text books which are followed by the Indian Universities. But while reading, you will be tempted to experiment with many of the techniques explained which are very easy to follow because of the user friendly materials. We invite your suggestions to modify the contents so that the next edition will be a better product. The authors are grateful to Professor Muniratnam Naidu who was kind enough to provide this book with a foreword. We sincerely thank the contributors who have added tremendously to the quality of this book. The authors sincerely urge the teachers, practising professionals and the students to give a kind and critical perusal of this book.

A Comprehensive Textbook of Complete Dentures Sep 04 2020 : (1) Prosthodontics enjoys the honor of being the largest and probably the oldest discipline in the whole of dentistry. The technical importance of the subject may be understood by the fact that it is the only subject in the dental professional curriculum that is taught at the undergraduate (BDS) level from I year to the final year of the curriculum with maximum number of teaching hours devoted to it. The teeth are being extracted and being replaced by artificial teeth since a very long time. This may be some or all of the teeth. The complete dentures form one of the most important fields of Prosthodontics as this deals with majorly the restoration of the function of the patient. Thus a successful Prosthodontic treatment is a boon especially to the elderly section of our society which usually gets cutoff from the main stream of the social structure owing to their physical weakness and mental frustration which creates a vicious circle in the minds of these gentle people. Once restored to proper health and good oral functions, a tremendous boost of confidence is appreciated in such patients as they begin to re-enjoy their life and in a sense begin to re-live it. It basically covers all of the associated aspects of complete dentures also giving an insight into the Prosthodontic viewpoint of the maxillofacial prosthetics and the implant dentistry, hence encompassing the major part of complete dentures and to that the latest trends.
