Interdisciplinary Approaches for Sustainable Development Goals Aug 17 2021 This book discusses the impacts of climate change that are already being felt on every continent and provides the scientific basis for a number of modern approaches and state-of-the art methods for monitoring the environment, social behavior and human expectations concerning protection of the environment. The book approaches these issues from the perspectives of various disciplines, from physics to the social sciences, and highlights both current challenges and future prospects. On 1 January 2016, the 17 Sustainable Development Goals (SDGs) defined in the 2030 Agenda for Sustainable Development - 12 of which involve taking action on climate change - officially came into force. To achieve sustainable development, it is and will remain crucial to harmonize three interconnected core elements: economic growth, social inclusion and environmental protection.

[U-Boat Attack Logs](#) May 26 2022 "An indispensable reference work for anyone studying either the U-boat campaign or WW2 at sea . . . copiously illustrated, fascinating—and harrowing."—Navy News During the Second World War over 250 Allied warships from a dozen navies were sent to the bottom by German U-boats. This ground-breaking study provides a detailed analysis of every sinking for which source material survives from both the Allied and the German sides, resulting in detailed treatment of the fate of 110 vessels, with the remainder summarized in an extensive appendix. Uniquely, each entry is built around a specialist translation of the relevant segment of the war diary (log) of the U-boat in question, taken directly from the surviving originals—remarkably, this represents the first large-scale publication of the U-boat war diaries in any language. The book offers a wealth of new information, not only with respect to the circumstances of the sinkings from both the Allied and German perspectives, but also to the technical environment in which they lived as well as the fate of the crews. The entries include background details on the vessels concerned and the men involved, with a selection of rare and carefully chosen photos from archives and collections around the world. Each entry is itself a compelling narrative, but is backed with a list of sources consulted, including documents, published works and websites. A decade in the making, this is probably the most important book on the U-boat war to be published for many a year. "Offers significant new information on many of the most famous incidents."—Maritime Advisor

Queen Elizabeth Class Battleships Dec 01 2022 The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring colour profiles and highly detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic survey of selected high-quality models in a variety of scales, and the book concludes with a section on research references - books, monographs, large-scale plans and relevant websites. This volume covers the five ships of the highly successful Queen Elizabeth class, a design of fast battleship that set the benchmark for the last generation of dreadnoughts. Although they fought with distinction in WW1, all were thought valuable enough to be modernised between the wars - indeed, three were massively reconstructed, providing the modelmaker with a challenging variety of possible subjects.

County Class Cruisers Oct 31 2022 "A detailed look at British 10,000-ton Treaty Cruisers. "A gem of research by the author, covering the design and progressive improvements to each ship."—Malcolm Wright, author of *British and Commonwealth Warship Camouflage of WWII* The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeler through a brief history of the subject class, highlighting differences between sisterships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring color profiles and highly detailed line drawings and scale plans. The modeling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references books, monographs, large-scale plans and relevant websites. This volume covers the British 10,000-ton Treaty Cruisers, thirteen of which were built to three slightly varying designs between the wars. With three funnels and a high freeboard, they were impressive ships, and all enjoyed very active wartime careers—three were involved in the Bismarck action and another with the sinking of the Scharnhorst. "This book by Les Brown is rather like the Sci-Fi 'Tardis' in that its outside belies the tremendous amount on the inside."—Malcolm Wright, author of *British and Commonwealth Warship Camouflage of WWII*

British Town Class Cruisers Sep 25 2019 Entering service between 1937 and 1939, the ten British 'Town' class cruisers were the most modern vessels of their type in the Royal Navy when the Second World War began. Built in response to large 6-inch gunned cruisers in the US and Japanese Navies and primarily designed for the defence of trade, they saw arduous service in a wide range of roles, playing a decisive part in victories such as the Battle of the Barents Sea and the destruction of the German Scharnhorst at the North Cape. The cost was heavy: four of the ships were lost and the other six all survived heavy damage, in some cases on more than one occasion. In this major study, Conrad Waters makes extensive use of archive material to provide a technical evaluation of the 'Town' class design and its subsequent performance. He outlines the class's origins in the context of inter-war cruiser policy, explains the design and construction process, and describes the characteristics of the resulting ships and how these were adapted in the light of wartime developments. An overview of service focuses on major engagements, assessing the extent to which the class met its designers' expectations and detailing the consequences of action damage. Concluding chapters continue the story into the Cold War era, examining the modernisation programme that kept the remaining ships fit for service during the 1950s. Heavily illustrated with contemporary photographs and drawings by A D Baker III, John Jordan and George Richardson, *British Town Class Cruisers* provides a definitive reference to one of the Royal Navy's most important Second World War warship designs.

Japanese Heavy Cruisers Jul 28 2022 The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring colour profiles and highly-detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references books, monographs, large-scale plans and relevant websites. This volume is devoted to the largest cruisers in the Imperial Japanese Navy. Built in defiance of treaty restrictions, they were the fastest and most powerful heavy cruisers of their day, and were heavily engaged in every campaign from Pearl Harbor to the end of the Pacific War.

Naval Ship Models of World War II in 1/1250 and 1/1200 Scales Feb 20 2022 The origins of 1/1250 and 1/200 scale models can be traced back to the first years of the twentieth century and their use as identification aids by the military during the First World War. When peace came the manufacturers aimed their increasingly sophisticated products at collectors, and ever since then acquiring, enhancing, modifying or scratch-building miniature ship models has been an avidly pursued hobby around the world. This new book focusses on models of the ships of the Second World War, probably the most popular subject for miniature model collectors, and the author, a well-known modeller himself, addresses all the practical issues that might confront those many collectors who like to enhance, convert, and modify their models, or even scratch-build models of ships not commercially available. The book covers both Allied and Axis warships, naval airplanes, merchant conversions and even an Italian armed schooner, and provides historic and technical information on the ships represented as well as practical advice on modelling them. The latter is extensive with twenty-five chapters covering everything from initial production techniques such as spin casting, silicon mould casting, resin casting, die-casting, plastic mould injection, and 3D printing through techniques for enhancing and modifying models to eventually researching and scratch-building an uncommon ship or type. The focus is always on particular vessels and the vast array covered by the author builds into a fascinating panorama of the vessels that fought across the world's oceans in that era. The combination of intriguing background and historical information, combined with detailed practical information and more than 300 stunning photographs will make this book irresistible to any collector or modeller and, indeed, to anyone with an interest in the navies of the Second World War.

British Destroyers: J-C and Battle Classes Apr 24 2022 "A terrific author . . . invaluable to the modeler wishing to reproduce these classes of destroyers, and also to those interested in naval history."—IPMS Magazine The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. A follow-up to ShipCraft 11 on inter-war destroyers, this new volume deals with the later classes which were the most modern British destroyers of the Second World War. Marked by a common single-funneled silhouette, they were actually very varied, ranging from the large and powerful J to N flotillas, via the austere "War Emergency" classes that were built in large numbers, to the radically different "Battle" class, designed with a powerful AA armament for service in the Pacific. "This book will be of interest to those who want an easy reference book that covers the British and Australian destroyers of this period, especially with regard to camouflage and overall appearance in service."—Australian Naval Institute

German Pocket Battleships Nov 27 2019 Everything the ship modeller needs to know about building a famous warship Numerous detailed plans and colour illustrations Focuses on very popular modelling subjects which are represented by a wide selection of kits The 'ShipCraft' series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, using scale plans to highlight differences between sisterships and changes in their appearance over their careers, then moves to an extensive photographic survey of either a high-quality model or a surviving example of the ship. Hints on building the model, and on modifying and improving the basic kit, are followed by a section on paint schemes and camouflage, featuring numerous colour profiles and highly-detailed line drawings. The strengths and weaknesses of available kits of the ships are reviewed, and the book concludes with a section on research

references—books, monographs, large-scale plans and relevant websites. For the first volume in this series, the author has chosen the German 'pocket battleships' of WW2, the best-known of which was the Graf Spee of Battle of the River Plate fame. This innovative and infamous class of surface raiders has long been a popular subject for ship modellers, many manufacturers producing kits of the Graf Spee and the rather different Admiral Scheer and Lützow. This book will show ship modellers how to turn their kits into something really special, but its unparalleled level of visual information will also appeal to the more general warship enthusiast. Roger Chesneau is a lifelong ship modeller and author of numerous naval books, including *Ship Models in Plastic*.

The latest in this series covers the three ships of this First World War type, Hood, Repulse and Renown, which survived to fight in the Second. Still the fastest capital ships in the world in 1939, their protection was not up to contemporary standards and two were famously lost in action. Hood in an old-fashioned gunnery duel, but Repulse succumbed to the more modern threat of aerial attack. The one modernised ship, Renown, survived an adventurous wartime career.

Ship Models from Kits Aug 29 2022 In the past thirty years the world of model kits has undergone a veritable revolution. New techniques in injection moulding have improved the scale accuracy and surface detail of the humble plastic kit, while many specialist companies now produce top-quality resin models, vastly broadening the range of subjects on the market. However, the really radical change has been the advent of photo-etched brass fret, which allows the finest detail to be reproduced to scale. In ship modelling, this has resulted in a new form of the hobby, mid-way between traditional build-from-the-box simplicity and the time-consuming demands of fabricating everything from scratch. These new materials have prompted innovative techniques, which are comprehensively demonstrated in this new manual. Designed for those wishing to achieve the best results from their ship kits in the 1:700 to 1:350 range of scales, it uses step by step photographs to take the reader through the building of two models, one in plastic and one in resin, from basic construction, fittings and detailing, to painting, finishing and display. Written by a highly experienced, award-winning ship modeller, the book is a showcase for the contemporary approach to the hobby.

Gleby bielicoziemne - geograficzne trendy oraz dyskontynuacje procesów rozwoju Jan 28 2020 Książka przedstawia geograficzne zróżnicowanie właściwości gleb bielicoziemnych będące następstwem różnic ich genezy uwarunkowanej czynnikami czasu i uwarunkowań siedliskowych. Przedstawione w niej wyniki stanowią syntezę istniejących dotychczas poglądów na temat rozwoju gleb bielicoziemnych, poszerzonych o poglądy autorów wynikające z ich wieloletniego doświadczenia badawczego i studiów porównawczych przeprowadzonych w pięciu regionach geograficznych, różniących się pod względem wieku gleb i środowisk sedymentacyjnych substratu glebowego. Praca może być bardzo pomocna w zrozumieniu funkcjonowania systemu glebowego dla studentów oraz pracowników naukowych wielu dyscyplin naukowych, jak gleboznawstwo, geografia, leśnictwo czy geologia w wymiarze czasu i przestrzeni.

Big Gun Monitors Nov 19 2021 In the history of naval warfare probably no type of ship has provided more firepower per ton than the monitor indeed they were little more than a huge gun mounting fitted on a simple, self-propelled raft. Designed and built rapidly to fulfil an urgent need for heavy shore-bombardment during World War I, they were top secret in conception, and largely forgotten when the short-lived requirement was over. Nevertheless, they were important ships, which played a significant role in many Great War campaigns and drove many of the advances in long-range gunnery later applied to the battle fleet. Indeed, their value was rediscovered during the Second World War when a final class was built. Monitors were largely ignored by naval historians until Ian Buxton produced the first edition of this book in 1978. Although published privately, this became an established classic and copies of the first edition are now almost unobtainable, so this new edition will be welcomed by many. It has been completely revised, extended and redesigned to a generous large format which allows material deleted from the original edition for lack of space to be restored.
