The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they

represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report. The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care.

In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing. *Self-Care for New and Student Nurses* presents techniques to prepare you for stressors present now and those to come. No matter where you are in your nursing career, this book offers you multiple ways to prioritize your own mental, physical, and emotional health. This popular title from the *Fundamental Aspects of Nursing* series has been revised and updated to reflect the advances in the field. Vital reading for all student nurses to help them develop an understanding of the myriad of dilemmas in professional practice and ensure they meet professional standards. This book will outline the implications and application of the relevant recent legislation that relates to nursing practice. Professionally, this book will look at the demands and requirements of nursing, as it moves to an all graduate profession, and the subsequent legal and ethical implications. It will also be helpful for qualified nurses as a refresher text & for those undertaking Overseas Nurses' Programmes. With the new Nursing and Midwifery Council's proposals, there is a greater emphasis on nurses' awareness and ability to use, and be assessed in, legal, ethical and professional issues in their clinical practice. Being an effective and well-rounded nurse in Australia is not just about technical skills - it's also about thinking like a nurse. *The Road to Nursing* helps students develop clinical reasoning and critical reflection skills, understand the philosophical and ethical considerations necessary to care for clients and reflect on how to provide care that meets the unique needs of clients. This edition retains three parts which guide students through their transition to university, formation of a professional identity and progression to professional practice. A revised chapter order improves the transition between topics and a new chapter explores the ever-changing Australian health landscape, including recent technological innovations. Each chapter includes definitions of key terms, reflection questions, perspectives from nurses, end-of-chapter review questions, research topics and resources that connect students with the real-world practice of nursing. Written by healthcare experts, *The Road to Nursing* is a fundamental resource for students beginning a nursing career. This text is a comprehensive coverage of concepts critical to the development of the nursing role: philosophy, nature of nursing, ways of knowing, influences on the development of the nursing profession, history and nature of nursing science, evolution of nursing practice and education.

Print+CourseSmart Written especially for nurses in all disciplines and health care settings, this second edition of *The Nurses's Role in Medication Safety*

focuses on the hands-on role nurses play in the delivery of care and their unique opportunity and responsibility to identify potential medication safety issues. Reflecting the contributions of several dozen nurses who provided new and updated content, this book includes strategies, examples, and advice on how to:

- \* Develop effective medication reconciliation processes
- \* Identify and address causes of medication errors
- \* Encourage the reporting of medication errors in a safe and just culture
- \* Apply human factors solutions to medication management issues and the implementation of programs to reduce medication errors
- \* Use technology (such as smart pumps and computerized provider order entry) to improve medication safety
- \* Recognize the special issues of medication safety in disciplines such as obstetrics, pediatrics, geriatrics, and oncology and within program settings beyond large urban hospitals, including long term care, behavioral health care, critical access hospitals, and ambulatory care and office-based surgery

Breaking the Glass Ceiling documents the achievements of three leaders in Caribbean nursing at the time of the nascent struggle for indigenous leadership in all areas of West Indian society. It is a narrative of the lives of three extraordinary women who gained both regional and international recognition: Dame Nita Barrow of Barbados, Berenice Dolly of Trinidad and Tobago, and Dr. Mary Sievwright of Jamaica. A feminist and colonialist theoretical perspective is used for the exploration of political, social and economic structures of the societies prior and during the nurses' era in order to provide a context for their achievements and contributions. They were bright, black women who embraced each challenge that came their way as an opportunity for growth. This growth was not for personal gain or self-aggrandizement but for the good of womankind and the nursing profession...The single common distinguishing feature of these three women was their selfless devotion to service. They worked relentlessly to improve the image of nursing, the nursing profession, and the status of women. Each one did so in her own unique way, and each had a deep, abiding religious faith. Their stories depict their different approaches to their service to women generally and nursing specifically, whether it was in the international arena, in the Caribbean setting or in their own native land. They were outstanding role models. They rose to prominence in a society in which racism, gender and class distinctions existed and did so with continued vitality and political savvy then most women at the time. They defied tradition within a traditional woman's occupation. They blazed the way for black women and nurses in particular to reach for the top. They were the first black women in nursing in the Caribbean to receive

national and international acclaim, albeit not all to the same extent, and were the acknowledged role models for black nurses and women in the region. An invaluable nursing handbook to increase your confidence with medicine management In the newly revised Second Edition of *Medicine Management Skills for Nurses*, renowned nursing trainer Claire Boyd delivers a concise, pocket-sized companion to the subject of medicines management and drug administration that's perfect for student nurses, associate practitioners, and newly qualified registered nurses. Part of the popular *Student Survival Skills* series, this edition includes tips, advice, and words of wisdom from nursing students written for people working through the nursing curriculum. It mirrors the standards set by the Nursing and Midwifery Council and contains interactive student activities throughout the book. An ideal companion to the forthcoming *Calculation Skills for Nurses*, 2nd Edition, the latest edition of *Medicine Management Skills for Nurses* is packed with conversational, accessible guidance to help you understand and handle medicines with confidence and competence. It also includes:

- Thorough introductions to the general principles of drug administration and to pharmacokinetic and pharmacodynamic concepts
- Comprehensive explorations of oral drug administration and administration by injection
- Practical discussions of calculations for working out medicine dosages
- In-depth examinations of specific, commonly used drugs and individual medical conditions, as well as pain management

Ideal for pre-registration nursing students and nursing associates, the latest edition of *Medicine Management Skills for Nurses* is an indispensable resource for anyone seeking practical and student-centered advice for managing medicines in a clinical environment. The author joined the nursing profession a few short years after the National Health Service was launched, and when nursing was still an almost entirely female occupation. In the present era of political correctness and studied avoidance of sexual discrimination, male nurses are not exposed to the horrors which Mike Bolger recalls so amusingly in this book. The book is illustrated with cartoons which exactly identify the situations Mike Bolger describes, and add an extra dimension to an already rich tapestry. This is one of those books that have to be read from cover to cover. Everyone who has ever worked in the nursing profession will recognise the total authenticity of the stories Mike tells, and everyone, nurse or not, will be able to laugh and cry with him. The guidelines and skills required to become a nurse are always changing and it can be difficult to stay up-to-date with the current standards. This book has been specifically designed to address the main skills you need to meet NMC

requirements. Becoming a Nurse will demystify what you need to know while preparing you to meet NMC standards and become a confident, practising professional. The book introduces the many subjects outside the biological which are none the less essential for both pre-registration and practising nurses. This new edition has been thoroughly updated throughout, and includes four new chapters on psychosocial concepts for nursing; sociological concepts for nursing; spiritual care; and preceptorship and transition. Like the previous edition the book also covers: Law, ethics and policy Management and leadership Communication, interpersonal skills and interprofessional working Evidence based practice Medicines management Public health and professional development Each chapter is packed full of case studies, discussion question and further readings to encourage critical thinking and reflection. It is an excellent resource to prepare you for your programme or to refresh your knowledge of NMC standards. This textbook draws on international contributors with a range of backgrounds to explore, engage with and challenge readers in understanding the many aspects and elements that inform and influence contemporary nursing practice. With a focus to the future, this book explores the challenges facing health services and presents the arguments for a nursing contribution and influence in ensuring safe and quality care. Readers are supported to explore how, as individuals, they can shape their personal nursing identity and practice. The structure of the text is based on the belief that an individual nurse's professional identity is developed through an interaction between their personal attributes and the influences of the profession itself. Reflecting this approach, the authors engage in a conversation with the reader rather than simply presenting a series of facts and information. Organised around a series of topical and pertinent questions and drawing on perspectives from policy, education and practice, the book explores a diverse range of topics such as: how historical and popular media representations of nursing hold back nursing practice today; the opportunities presented through education and nursing role development to increase the nursing contribution to health services; the economic and political influences on nursing and health care; how the professional regulation of nurses and core values informs your practice; ways to define and develop your own strong nursing identity. Central chapter questions provide ideal triggers for group discussions in class or online and equally as discussion topics between colleagues to support ongoing professional development. There is an emphasis throughout Nurses and Nursing on challenging thinking to recast nursing practice for the future

by encouraging the reader to explore and create their emerging nursing identity or re-examine previously long held views. This text supports the reader to better understand health care, nursing and most importantly themselves as nurses. This significantly revised 5th edition provides nurses with a practical guide to the fundamental concepts of digital health from a nursing perspective. Nursing informatics has never been more important as contemporary healthcare continues to experience tremendous technological advances. The nursing profession is ideally positioned as a key enabler for the design and adoption of emerging eHealth models of care and quality outcomes. The book also features real world examples to illustrate the theory and encourages readers to think critically about their current practices and how they can potentially integrate relevant theories and techniques into their future practice to advance integrated care. Introduction to Nursing Informatics is designed for use as a primer for practicing nurses and students in undergraduate programs of study and includes contributions from leading international experts who have practiced in the field over a number of years. The information is presented and integrated in a purposeful manner to encourage readers to explore the key concepts of nursing practice, digital health, health information management and its relationship to informatics. This textbook draws on international contributors with a range of backgrounds to explore, engage with and challenge readers in understanding the many aspects and elements that inform and influence contemporary nursing practice. With a focus to the future, this book explores the challenges facing health services and presents the arguments for a nursing contribution and influence in ensuring safe and quality care. Readers are supported to explore how, as individuals, they can shape their personal nursing identity and practice. The structure of the text is based on the belief that an individual nurse's professional identity is developed through an interaction between their personal attributes and the influences of the profession itself. Reflecting this approach, the authors engage in a conversation with the reader rather than simply presenting a series of facts and information. Organised around a series of topical and pertinent questions and drawing on perspectives from policy, education and practice, the book explores a diverse range of topics such as: how historical and popular media representations of nursing hold back nursing practice today; the opportunities presented through education and nursing role development to increase the nursing contribution to health services; the economic and political influences on nursing and health care; how the professional regulation of nurses and core values informs your

practice; ways to define and develop your own strong nursing identity. Central chapter questions provide ideal triggers for group discussions in class or online and equally as discussion topics between colleagues to support ongoing professional development. There is an emphasis throughout Nurses and Nursing on challenging thinking to recast nursing practice for the future by encouraging the reader to explore and create their emerging nursing identity or re-examine previously long held views. This text supports the reader to better understand health care, nursing and most importantly themselves as nurses. The first book on emotional intelligence (EI) written for nurses, this comprehensive resource delivers both the theoretical knowledge and practical skills to improve patient outcomes. Authored by one of the foremost experts in EI and nursing, the text discusses the foundations of EI and shows how EI skills can and should be applied to any practice setting in nursing. Using core concepts of EI and evidence-based research, this publication discusses the implications of EI on key nursing challenges such as burnout, patient safety, staff retention, conflict management, ethical decision-making, quality and safety, and wellness. Emotional Intelligence in Nursing addresses the application of EI skills in various arenas of clinical practice and in advanced practice nursing roles. Each chapter contains one or two case studies featuring a nurse or care team at a crossroads event. Sometimes the clinicians in the case studies use EI skills; sometimes they do not. The case study is then analyzed through the lens of the four basic EI abilities, highlighting key practical takeaways for the reader to absorb and incorporate into their own practice to provide better care for themselves, their care team, and their patients. Key Features: Demonstrates how the implementation of EI results in superior patient outcomes Provides a foundation in EI concepts and demonstrates its application in a variety of nursing practice settings Discusses implications of EI for teaching, burnout/thriving, staff retention, conflict management, and ethical considerations Presents real-life scenarios through case studies Address the needs of all nurses, from students to educators, from new nurses to nurse executives Provides final year nursing students with comprehensive guidance on how to make the leap from student to registered nurse, helping them to master the skills needed to progress from supervised to professional practice. Packed with key information, theory and advice, this book covers essential topics such as leadership and management, decision-making, professional development, assessment, law and ethics. It also provides students with an insightful overview of global nursing, exploring the issues of nurse migration

and outlining the specific requirements for registering as a nurse in countries outside of the UK. To further support students in their learning, the book includes engaging activities that encourage critical reflection, real-life example scenarios to help with decision-making, and references to the author's personal experiences of professional development. "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

Leadership is central to all aspects of the nursing role, from managing the delivery of high quality care to acting as a role model for best practice. Written specifically for nursing students, this book introduces you to the principles and practice of leadership, management and multi-disciplinary team working. Key features:

- o Each chapter is mapped to the 2018 NMC standards
- o Introduces the core leadership theory you need to know, using case studies and reflective activities to show how it relates to your practice
- o Updated throughout including new content on the impact of COVID-19 and increased coverage of emotional intelligence and resilience
- o Builds your understanding of the challenging aspects of leadership including managing conflict, being assertive and leading service improvement

This book helps potential nursing students succeed in getting into nursing. It gives practical help on the application process: filling out application forms; passing numeracy and literacy tests; and succeeding at interviews. It also explains what nurses do, what personal qualities are needed and what is involved in nursing training, so applicants can decide whether nursing is really for them. This book has been carefully shaped to answer all of the common questions applicants are likely to have, along with many they will not yet have thought of. It has been updated in light of the recommendations in the Francis Report and covers values-based recruitment, the importance of compassion in practice and considers the needs of non-traditional applicants and mature students. Features of the book include: practice numeracy and literacy tests to help students face their interview day with confidence all the information students

need given in one place with no need to trawl through countless websites looking for answers to questions helpful advice on choosing the right course and succeeding in the application top tips and stories from real nurses, students, patients and lecturers that explore 'from the inside' what nursing is like example interviews to help students prepare for the big day. The Student's Guide to BECOMING A NURSE The Student's Guide to Becoming a Nurse is an essential guide for all student nurses who want to become competent practitioners. It explores the knowledge, skills and attitudes that all pre-registration nursing students must acquire by the end of their programme of study, enabling them to become confident, successful nurses. Thoroughly re-written and updated to include the latest 2010 NMC standards for pre-registration nursing education, this invaluable textbook is divided into four key sections: Professional values Communication and interpersonal skills Nursing practice and decision making Leadership, management and team working With case studies, top tips, activities and questions throughout, The Student's Guide to Becoming a Nurse is ideal for all pre-registration nurses and those about to qualify. Student Reviews "It's been designed for students and that's why I like it... it is student friendly, useful, easy to read." Tamara Thomas, 2nd year nursing student, Swansea University "I cannot fault the content – it is straight to the point, it provides some interesting resources for a student nurse that is essential for them to know... a joy to read." Faye Elliott, 2nd year nursing student, Keele University "I think the content and material is excellent... I will definitely be making recommendations to my friends." Leanne Curran, 2nd year nursing student, University of Ulster "This book is truly amazing and provided all of the information needed for my final exam to become a qualified nurse. I passed with flying colours, thanks." Amazon review What type of degree do I need to become a nurse practitioner? How do I choose the right clinical preceptor? How can I best prepare for my first year of practice? Written for those considering NP practice, current NP students, and newly certified NPs alike, this quick, easy-to-use manual covers everything there is to know about transitioning into the NP role, its rewards, and its challenges. This second edition includes several new chapters, covering electronic health records, the impact of health care reform, promoting the NP role, and choosing a doctoral program. All of the original chapters have been revised or expanded, with updated key points, tables, and vignettes supplying cutting-edge knowledge and skills to help new NPs excel. The only resource of its kind, this book guides the reader through the entire process of becoming an NP, from the

initial decision to the selection of the right educational program to licensure. It discusses the contractual relationship with institutions and related health providers, along with legal and administrative issues. Currently practicing NPs offer words of wisdom on how to survive the first year of practice, and stories from the author and her colleagues provide an intimate look at everyday realities. Organized for easy access to information and filled with humor, the book features learning objectives, quizzes, checklists to facilitate decision making, and other helpful tools. Fast Facts in a Nutshell boxes highlight need-to-know information, and useful tips and resource lists provide information on scholarships, certification, professional organizations, and networking. New to the Second Edition: The dos and don'ts of electronic health records Surviving health care reform today and tomorrow Marketing the NP role to the nursing profession, employers, and the public The terminal degree in nursing: PhD, EdD, or DNP? Revised and expanded information in all chapters Updated key points, vignettes, and tables Nadine M. Aktan, PhD, RN, FNP-BC, received her bachelor's, master's, and doctoral degrees in nursing from Rutgers University College of Nursing and Graduate School in New Brunswick and Newark, New Jersey. She is currently chairperson and associate professor at William Paterson University in Wayne, New Jersey, teaching future nurses and nurse practitioners. She also practices as a family nurse practitioner at the Immedicenter, an urgent care/family practice with locations in Clifton, Bloomfield, and Totowa, New Jersey, and as a maternal/child community health nurse for Valley Home Care in Paramus, New Jersey. Assessment is an essential part of mental-health nursing and as such a core learning requirement for pre-registration nursing students. Getting assessment right is essential for the nursing student in order for them to become an effective practitioner. Many books on assessment are very theoretical. This is a practical, hands-on guide to the assessment process, underpinned by the latest evidence. The book explains the core principles through running case studies, so that readers can see how each decision they make impacts on the person in their care. Key features: Assessment principles are applied across a variety of modern nursing settings that you may find yourself working in as a registered nurse Each chapter is linked to the relevant NMC standards and Essential Skills Clusters so you know you are meeting the professional requirements Activities throughout help you to think critically and develop essential graduate skills. Future healthcare services are changing to give patients more rights over their own healthcare. The NMC requires that nurses work in partnership with those in their care. This book

provides a timely guide to enabling patient and carer participation in nursing care. It challenges the reader to see the person in the patient and explores the nature of the nurse-patient relationship. It gives practical advice on how students can promote participation on placements and in practice. The book also offers an insight into the realities of being a carer, and discusses how quality of patient experiences can be assessed. Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. (SW) The purpose of this book, *Missing Caps*, is to indicate the multiple factors leading to the nurse shortage in three different countries and the solutions thereof. The author shows also part of her life story mingled with her nursing career experiences, as well as the experiences of her nursing colleagues. Their experiences revealed the reasons behind the shortage of nurses. It is the product of extensive research and memories of the past. In spite of what had happened, there is the implication that nursing is an interesting and helping profession for extending the lives of the human race. Nurses are the heartbeat of health care. Doctors may dispense prescriptions, but it is nurses who bring about the cure. A good nurse is one who embodies medical expertise, compassion, patience, and such a nurse is hard to find. After being involved in the nursing profession most of her life, Betty Navratil, in her invigorating new book, *Missing Caps*, details the reasons why there is a dearth of nurses in Hong Kong, United States, and Canada. Telling with a candid perspicuity, Navratil

gives us some of the most graphic story of some of the accounts of endless shifts, racism, prejudice, and unprofessionalism that contribute to the high turnover rates in the nursing profession. But Navratil does not leave us in the dire plunge. Rather, through her erudite research and piquant observations, she offers some revolutionary solutions that will elevate such a shortfall of nurses. Navratil writes in such a gripping way that you will find your eyes glued to every word and you will find your heart stirred by her stories. This book deserves wide circulation, and considering the plight of our health system, this book is a must-read, and it deserves to be a textbook for all aspiring nurses.

Timothy Yap, PhD *Passing the HESI Admission Assessment Exam* is the first step on the journey to becoming a successful healthcare professional. Be prepared to pass the exam with the most up-to-date *HESI Admission Assessment Exam Review, 5th Edition!* From the testing experts at HESI, this user-friendly guide walks you through the topics and question types found on admission exams, including: math, reading comprehension, vocabulary, grammar, biology, chemistry, anatomy and physiology, and physics. The guide includes hundreds of sample questions as well as step-by-step explanations, illustrations, and comprehensive practice exams to help you review various subject areas and improve test-taking skills. Plus, the pre-test and post-test help identify your specific weak areas so study time can be focused where it's needed most. HESI Hints boxes offer valuable test-taking tips, as well as rationales, suggestions, examples, and reminders for specific topics. Step-by-step explanations and sample problems in the math section show you how to work through each and know how to answer. Sample questions in all sections prepare you for the questions you will find on the A2 Exam. A 25-question pre-test at the beginning of the text helps assess your areas of strength and weakness before using the text. A 50-question comprehensive post-test at the back of the text includes rationales for correct and incorrect answers. Easy-to-read format with consistent section features (introduction, key terms, chapter outline, and a bulleted summary) help you organize your review time and understand the information. NEW! Updated, thoroughly reviewed content helps you prepare to pass the HESI Admission Assessment Exam. NEW! Comprehensive practice exams with over 200 questions on the Evolve companion site help you become familiar with the types of test questions. The latest edition of this popular volume has been fully updated throughout to meet the needs of the 2018 NMC Standards of Proficiency. Richly illustrated throughout, the book comes with 'real-life' Case Studies to help readers contextualise and apply new information,

pathophysiology to explain disease processes, enhanced discussion of pharmacology and medicines management to assist with 'prescribing readiness', and helpful learning features which include Key Nursing Issues and Reflection and Learning – What Next? Available with a range of supplementary online tools and learning activities, Alexander's Nursing Practice, fifth edition, will be ideal for all undergraduate adult nursing students, the Trainee Nursing Associate, and anyone returning to practice. New edition of the UK's most comprehensive textbook on Adult Nursing! Retains the popular 'three-part' structure to ensure comprehensive coverage of the subject area – Common Disorders, Core Nursing Issues and Specific Patient Groups Illustrative A&P and pathophysiology help explain key diseases and disorders 'Real-life' Case Studies help contextualise and apply new information Explains relevant tests and investigations and, when needed, the role of the nurse in the context of each of them Helpful learning features include Key Nursing Issues and Reflection and Learning – What Next? Encourages readers to critically examine issues that are related to care provision Useful icons throughout the text directs readers to additional online material Glossary contains over 300 entries to explain new terminology and concepts Appendices include notes on Système International (SI) units and reference ranges for common biochemical and haematological values Perfect for second and third-year undergraduate nursing students, senior Trainee Nursing Associates, those 'returning to practice' or needing to review practice and prepare for revalidation Edited by the world-renowned Ian Peate – editor of the British Journal of Nursing – who brings together a new line up of contributors from across the UK and Australia Reflects contemporary issues such as the complexity of acute admissions and the increasing importance of the multidisciplinary approach to patient care Reflects the 2018 NMC Standards of Proficiency for Nurses and the NMC 2018 Code Helps prepare students for 'prescribing readiness', with basic principles of pharmacology, evidence-based person-centred approaches to medicines management and an understanding of the regulatory, professional legal and ethical frameworks Recognises the introduction of the Nursing Associate role in England Nursing in the Community: an essential guide to practice is an introductory textbook for professionals and students who have chosen a career in community health care nursing. The book gives comprehensive coverage of the full range of professional issues, such as personal safety and the environment, in addition to public health, health promotion and family health nursing. This user-friendly text provides clear guidelines on how to

transfer skills from the hospital/ acute setting to the community. In addition, it fully reflects current government health, social policy, the implications for the roles and responsibilities of the community health care nurse, and aims to support a trainee/new practitioner to function safely and effectively in the full range of community settings. Covering the issues, themes and principles that explain what it means to be a nurse today, this book provides the theory students need to know and applies it to the diverse patient groups and settings that students will encounter on their placements. Key features of the book are:

- It introduces the core aspects of adult nursing An evidence-based approach with discussion of literature, policy and research and suggested further reading for every chapter
- Over 30 case studies to help students understand the realities of practice across a range of settings including primary care and the community
- Stop and think boxes which challenge assumptions and encourage reflection
- A companion website with sample questions for lecturers to use in seminars, multiple choice questions for student revision and free SAGE journal articles

The book has been closely mapped to the NMC's 2018 Standards for Proficiency, Education and Training and supports students across their entire degree programme as they develop into nurses of the future ready to deliver and lead care. *Nursing Practice and Health Care* is an essential companion to pre-registration nursing education programmes, for those studying at degree and diploma level, and for students on post-registration courses. This fifth edition has been completely revised to reflect the current professional and educational requirements for those preparing for registration as a nurse, while maintaining a strong focus on practice and reflecting the needs of those requiring nursing and health care. Additionally, it uses the 2008 NMC Code as the cornerstone for many of its chapters. Building on the changes in the fourth edition, the requirements of pre-registration nursing programmes, the fitness for practice initiative and other developments in health policy within the four countries of the UK, the book provides an invaluable support for students as they learn the skills in critical thinking that will enable the development of an accountable, professional practitioner. Both student- and patient-centred, the book is divided into five parts: Perspectives on nursing, Learning nursing, Practising nursing, Key aspects of care and Professional support and development. Key features:

- Completely revised and updated to reflect the new NMC Code
- Both student- and patient-centred
- Tackles key issues for today's student nurse, including health promotion, quality and the patient experience, informatics, diversity of care settings, accountable practice and ethics and the law
- Incorporates a wide

range of helpful text features including learning objectives, section and chapter summaries, patient scenarios and reflective points, useful websites and further reading Reflects the governmental reports, policies, frameworks and targets of all four UK countries The founder of the nursing profession discusses the image and the duties of the profession. This practical guide explores professional values in nursing, helping you to develop safe, compassionate, dignified, person-centred and evidence-based nursing practice. The emphasis of the book is on fundamental values of equality, dignity and caring. The authors discuss holistic nursing care, working in partnership with people and families, working collaboratively with the interprofessional team, vulnerability and safeguarding, challenging poor practice and promoting best practice. Features: Chapters linked to the Professional Values domain in the NMC Standards for pre-registration nursing education Strong evidence base to ensure best practice Accessible style with learning outcomes, practice scenarios, questions and activities Relevant to all fields of nursing, with practice scenarios representing people across the lifespan and with different healthcare needs Professional Values in Nursing is a valuable resource for all nursing students, helping to embed professional values in their everyday practice. Introduces all the core topics and essential information that nursing students, in all specialisms, will need to master during the first years of a nursing degree. Population-Based Public Health Clinical Manual: The Henry Street Model for Nurses has proven to be one of the most important public health texts for students and practitioners alike. Focused on developing a competent public health nursing practice in diverse settings, the core text builds on the Henry Street Consortium's framework of 12 competences for population-based, entry-level public health nursing. This full-color, newly designed third edition has completely revised and updated coverage, including:

- 17 Sustainable Development Goals (SDGs) that provide a framework for public health nursing practice
- A new competency on utilizing principles and science of environmental health to promote safe and sustainable environments for individuals, families, systems, and communities
- Examples demonstrating the global growth in public health nursing
- Theory applications showing how PHNs use frameworks to further public health initiatives

By exploring and analyzing the experiences and impressions of nurses, Annette Fay Street provides an intimate account of clinical practice and what those experiences mean in the profession. She highlights the realities and daily conflicts with which clinical nurses must deal, and offers insights into the culture and thinking that informs and

transforms their work. Europeanization has generated a galaxy of regimes, laws, organizations, new actors, and networks that have diluted institutional barriers to interaction across national borders. Many nation-based policy competencies have been transferred to the European level. The European Union (EU), the world's first regional regulator, bears consequences for the development of public policy and for policies affiliated with the nursing profession. With limited exception, the EU does not have formal powers in the health care arena. However, as a result of its efforts in other fields, it has been heavily involved with health care and its providers. Nursing in the European Union demonstrates how the organization has refashioned the nursing world throughout the member states via its power in many other policy domains. This volume focuses on the EU's impact on nursing education, regulation, and research endeavours, and suggests strategies to achieve desired objectives. Volume 2, *Nursing in the European Union: The World of Work*, to be published in Fall 2016, focuses on real-life situations and problems EU nurses face: wages, stress, and dispute resolution. Sondra Z. Koff integrates the European experience with a discussion of nursing in the real world, and presents the nursing profession in light of the European Union, its components, its mechanisms, and its output and activities. To successfully complete the transition from being a final year pre-reg nursing student to becoming a qualified staff nurse, students need to understand and practice the responsibilities and roles of the registered nurse. This book outlines the principles of professional practice and the skills of the qualified nurse. Pamphlet is a succinct statement of the ethical obligations and duties of individuals who enter the nursing profession, the profession's nonnegotiable ethical standard, and an expression of nursing's own understanding of its commitment to society. Provides a framework for nurses to use in ethical analysis and decision-making. This book describes the latest advances in health education and patients' self-management, addressing core questions such as: How can you motivate a patient to adopt a healthier lifestyle, and how can you support their self-management? Though there is a broad consensus within the nursing profession on the importance of health promotion and the promotion of self-management, nursing professionals often struggle with the underlying theoretical and practical aspects involved, as well as the right type of intervention to use and how to evaluate the results. The book departs from international trends, which primarily underline the importance of prevention and focus on such issues as the increase in the number of people with chronic health problems and co-morbidity, the

empowerment of patients, and the technological developments in the health care system. In the first chapters, it examines health at the micro-, meso- and macro-level, combined with epidemiological health indicators. The following chapters focus on prevention, health promotion and self-management, while also broadly discussing prevention. The book then turns to the development and purpose of, as well as plans for, health promotion and health education. The Intervention Mapping protocol is the starting point, addressing questions such as how to motivate a patient to other, healthier behavior. Subsequently, the field of health promotion is extended to disease prevention, patient education and self-management. On the basis of patients' needs, the book describes methods and interventions to promote self-management in detail. Self-management and chronic health problems are also highlighted, along with the patient's social network in connection with self-management and eHealth. Lastly, the book explores the relationship between nursing and health promotion, as well as disease prevention, nursing diagnoses, nursing interventions and care results. Additionally, this edition includes two trainings on 'Promoting the self-management of the patient ' and on 'What is the role of the nursing professional in promoting self-management of the patient?'. This book is intended for bachelor and master courses for nursing professionals and is linked to the CanMeds competencies of health promoters and reflective evidence-based working professionals.
