Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs 8 1/2 x 10 Since publication this title has proved to be very popular for both the serious lens user wishing to understand more about his lenses, as well as the Leica enthusiast considering which lens would be suitable to add to his outfit. Do you know your "Coma from your Aberrations"? If "Yes," then part 2 of Erwin Puts' new book will be of considerable interest to you. Either way you may find this section easier to understand than you expect; the illustrations and diagrams do help. Part 1 goes into the optical history of E. Leitz, Wetzlar and the Leica Camera of Solms in detail with all the personalities involved. This section is well illustrated with some new pictures. The commercial demands are always battling with the perfectionists at Leica who created some of the world's most famous lenses. Part 2 is an optical digression explaining the lens and glass design features, problems and terms and the continual battle to ensure that Leica users end up with the highest possible standard of lens. Part 3 is the largest part of the book. Puts has tested Leica lenses from 1925 to date; each lens, in most cases with diagram, is detailed with its performances at the critical apertures. Most people invest in the usual assets: real estate, gold, mutual funds, fixed deposits and stock markets. It's always the same four or five instruments. All they end up making is a measly 8 to 12 per cent per annum. Those who are exceptionally unfortunate get stuck in the middle of a crash and end up losing a lot of money. What if there was another way? What if you could make not 10 not 15 but 20 per cent compound annual growth rate (CAGR) on your investments? What if there was a way to grow your money four to five times whilst taking half the risk compared to the overall market? Bestselling author of Gurus of Chaos and The Unusual Billionaires, Saurabh Mukherjea puts his money where his mouth is. Saurabh follows the Coffee Can approach to high-quality, low-risk investing. His firm, Ambit Capital, is one the largest wealth managers in India which invests with this approach and delivers stupendous returns. In Coffee Can Investing, Saurabh will show you how to go about low-risk investments that generate great returns. The definitive, easy to understand and breakthrough guide on how young people can take their limited first income and turn it into a small fortune by the time they turn thirty from an expert financial planner. Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning

enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future. Archaeological investigations, undertaken as part of a programme to restore St George's Church, Bloomsbury, to its original Hawksmoor splendour, involved the removal of 871 triple lead-lined coffins from within the crypt and monitoring works within the churchyard. The elaborate named coffins of upper middle class parishioners provided a valuable opportunity to greatly develop the new field of post-medieval coffin analysis, and to integrate historical, archaeological and osteological data in order to build a vivid picture of this population. Over 90% of coffins were named, which allowed a rare opportunity to blind test osteological methods on 72 skeletons, whilst analysis of documentary and osteological evidence has challenged some long-held beliefs in post-medieval burial archaeology. Disease patterns in the St George's assemblage were influenced by the longevity and affluence of this population, factors that also underlay the necessity for elaborate and expensive dental treatment, including very early examples of fillings, filing and dentures. A guide to maximizing the impact of work done at public research institutions and universities to boost innovation and growth. Metrics matter for policy and policy matters for well-being. In this report, the co-chairs of the OECD-hosted High Level Expert Group on the Measurement of Economic Performance and Social Progress, Joseph E. Stiglitz, Jean-Paul Fitoussi and Martine Durand, show how over-reliance on GDP as the yardstick of economic performance misled policy makers who did not see the 2008 crisis coming. When the crisis did hit, concentrating on the wrong indicators meant that governments made inadequate policy choices, with severe and long-lasting consequences for many people. While GDP is the most well-known, and most powerful economic indicator, it can't tell us everything we need to know about the health of countries and societies. In fact, it can't even tell us everything we need to know about economic performance. We need to develop dashboards of indicators that reveal who is benefitting from growth, whether that growth is environmentally sustainable, how people feel about their lives, what factors contribute to an individual's or a country's success. This book looks at progress made over the past 10 years in collecting well-being data, and in using them to inform policies. An accompanying volume, *For Good Measure: Advancing Research on Well-being Metrics Beyond GDP*, presents the latest findings from leading economists and statisticians on selected issues within the broader agenda on defining and measuring well-being. This text describes the functions that the BIOS controls and how these relate to the hardware in a PC. It covers the CMOS and chipset set-up options found in most common modern BIOSs. It also features tables listing error codes needed to troubleshoot problems caused by the BIOS. In Part I, Prof. Targowski takes us through the evolution of modern computing and information systems. While much of this material is familiar to those of us who have lived through these developments, it would definitely not be familiar to our children or our students. He also introduces a perspective that I found both refreshing and useful: looking at the evolution on a country by country basis. For those of us who live in the U.S., it is all too easy to imagine that evolution to be a purely local phenomenon. I found my appreciation of the truly global nature of computing expanding as he walked me through each country's contributions. In Parts II and III, constituting nearly half of the book, Targowski provides what I would describe as an in-depth case study of the challenges and successes of informatics in Poland. As he tells each story—many of which involved him personally—the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in IT. Even after Poland left the orbit of the former Soviet Union, the remaining vestiges of the old way of thinking remained a major impediment to progress. Being right and being rigorous were far less important than being in tune with the “approved” ways of thinking. There are important lessons to be learned here, particularly as we try to project how IT will evolve in rapidly developing economies such as China. But, from my experience, they apply equally well to western academia, where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged. In Part IV, Targowski presents a bold, forward-looking synthesis of informatics and informing science in the future. Building upon articles recently published in *Informing Science: The International Journal of an Emerging Transdiscipline*, he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee. He then considers how these trends will necessarily force us to rethink how we develop and apply IT. He does not steer away from the controversial. But he also provides cogent arguments for all his predictions and recommendations.
